

to whom it may concern

## **Reference letter about CBOSSip Option::DIAMETER-translator in Tele2 Kazakhstan.**

Year 2011 become a huge success for Tele2 Kazakhstan with many challenges the company had to withstand.

One of them was and still is a conquering of a local market accompanied with an enormous growth of subscribers' base which rose new demands to hardware and software performance we used.

To handle projected amount of mobile internet traffic a new GGSN has been deployed within our network. Unfortunately, it proved unable to interact seamlessly with our existing OCS (Online Charging System) and had pure fail-over functionality jeopardizing our plans.

CBOSS has offered us CBOSSip Option::DIAMETER-translator option as a solution for mentioned problems.

Thanks to CBOSSip Option::DIAMETER-translator we were able to launch new GGSN in production, integrate it into our existing IT environment according to plans and deliver high speed and quality mobile internet services to our subscribers serving best their needs.

Acknowledging success of using CBOSSip Option::DIAMETER-translator and its potential we have plans to use it also for services not related to mobile internet access in nearest future exploiting flexibility, performance and scalability it provides.

Chairman of the Board  
Andrei Smelkov
